TECHNICAL SKILLS

AWS ECS Fargate ECR

Windows Server Hyper-V

IIS Linux Docker

CodePipeline CodeBuild

Terraform IAM Grafana

Prometheus Loki Tempo

OTel Lambda Python

Nginx Route 53 ALB

Jira Confluence

Agile/Scrum ServiceNow

CERTIFICATIONS

Advanced DevOps & Cloud Engineering Program

GUVI Geek Network · Grade A · Jan 2026

DevOps Program

GUVI x HCL · May–Oct 2025

AWS Solutions Architect Associate (Training)

Red9SysTech · Batch #8 · Apr 2025

Warehouse Advantage Certified Associate

Körber Supply Chain · Sep 2025

Full-Stack Development Training

3Edge Solutions · Dec 2022

EDUCATION

B.E, Civil Engineering

AVS Engineering College

Jun 2014 – Apr 2018

HSLC

Sri Ramakrishna Hr. Sec. School

Jun 2012 – Apr 2014

1 SUMMARY

Cloud Infrastructure and DevOps Engineer with **4 years of IT experience** spanning enterprise on-premises infrastructure and modern AWS cloud environments. Hands-on background in **Windows Server administration, Hyper-V virtualization, and Linux systems**, combined with production AWS DevOps expertise across ECS Fargate, EC2, IAM, and CI/CD pipeline engineering (CodePipeline, CodeBuild). At **Swirepay (fintech)**, managed multi-account AWS across staging and production in ap-south-1. Reduced CI/CD build time by **75%**, led zero-downtime EC2-to-ECS migrations, and built a Prometheus–Grafana–Loki–Tempo observability stack from scratch. Root-cause-first: diagnose from metrics, fix permanently, build for scale.

2 EXPERIENCE

AWS DevOps Engineer

Nov 2025 – Jun 2026

Swirepay Technologies Pvt. Ltd. · Chennai, Tamil Nadu · Fintech

- **CI/CD Engineering:** Built and maintained 100+ CodePipeline + CodeBuild pipelines across ap-south-1 and us-east-1 for Node.js, Spring Boot, Python, and React/Vite — Bitbucket → CodeCommit → CodePipeline → CodeBuild → ECR → ECS, with pipeline status and CloudWatch build logs tracked at every stage. Audited all entries; flagged dead pipelines and missing CodeBuild projects.
- **Build Optimisation:** 4-layer S3 caching (JAR, Maven, BuildKit, Trivy DB) with zstd; migrated base image to ECR Public. **Cold 40 → 10 min | Cached 25 → 6 min.**
- **ECS Fargate Migrations:** Led EC2 → ECS Fargate production migrations including Apache Superset — Aurora RDS permissions, ALB health checks, CORS, Secrets Manager re-encryption, and Route 53 DNS cutover with zero downtime.
- **IAM Security Hardening:** Replaced AWS-managed policies with scoped inline least-privilege roles across 10+ ECS task and execution roles; resolved cross-account ECR pull across 3 AWS accounts.
- **Observability Platform:** Deployed Prometheus + Grafana + Loki + Tempo + OTel Collector on ECS with path-based ALB routing and Cloud Map DNS. Grafana SMTP alerting for RDS CPU and application incidents.

Infrastructure & Cloud Engineer

Apr 2022 – Aug 2025

Enterprise Soft Labs Services Pvt. Ltd. · Hyderabad

- **Infrastructure Engineering:** Installed and configured Windows Server 2019/2022 environments from scratch for enterprise physical servers — OS setup, system validation, and production readiness.
- **Virtualization:** Administered Hyper-V — provisioning and managing VMs, allocating compute resources, and configuring virtual networking for enterprise application environments.
- **Web Hosting:** Configured and maintained IIS for enterprise web apps — site creation, Application Pools, bindings, SSL integration, and web.config management for production ASP.NET applications.
- **Cloud & Containerisation:** Designed AWS infrastructure (EC2, ECS Fargate, ECR, RDS, S3, VPC, CloudFront) for TXENIA, an AI/ML supply chain platform on Django and React; Dockerized and automated deployment with GitHub Actions, Route 53, and ACM SSL.
- **WMS & Production Support:** DEV/UAT/PROD migrations for global clients — Dr. Max (Czech Republic), Good Eggs, MAERSK, Deccan & Cold Store. Managed Körber, BarTender, SSRS, and OpenVPN.

Site Engineer — Ranipet Municipality, Govt. of Tamil Nadu

Jan 2021 – Sep 2021

Road measurements, cost estimation, and site monitoring for civil municipal projects.

Site Engineer — G.K Constructions

Nov 2018 – Dec 2020

Site monitoring and daily estimation for a Central Government power grid warehouse project.

3 KEY ACHIEVEMENTS

75%

SPEED

Spring Boot gateway CI/CD — cold 40 → 10 min, cached 25 → 6 min via 4-layer S3 caching (JAR, Maven, BuildKit, Trivy) + zstd + ECR Public base image.

Zero

UPTIME LOSS

Apache Superset EC2 → ECS Fargate production migration — Aurora, ALB, CORS, Secrets Manager re-encryption, Route 53 DNS cutover, all end to end.

100+

PIPELINES

Full CodePipeline audit across ap-south-1 and us-east-1 — flagged dead pipelines, missing CodeBuild projects, and deletion candidates in a structured workbook.

10+

IAM ROLES

Least-privilege hardening across 10+ ECS services — scoped inline policies replaced AWS-managed, cross-account ECR pull resolved across 3 AWS accounts.

Full

OBSERVABILITY

Prometheus + Grafana + Loki + Tempo + OTel Collector on ECS — path-based ALB routing and Cloud Map DNS replaced a fragmented multi-ALB architecture.

4 PROJECTS

CareerOS — AI-Powered Professional Intelligence Platform

(in development)

Solo-designed an AI-native career platform architecture built around a persistent “Professional Twin” user model, a hybrid multi-agent system (Google ADK + LangGraph), and an event-driven microservices design with a Kubernetes/ArgoCD deployment plan. Currently building the MVP on a Dockerized Django + React stack with CI/CD automation.

TXENIA — AI/ML Supply Chain Web App

React and Django application integrating ML models with historical and real-time supply chain data, deployed on AWS EC2 with GitHub Actions CI/CD and Docker.

5 KEY STRENGTHS

Problem Solver:

Automated EC2 and ECS deployment workflows, reducing manual intervention by 40%.

Collaborative Team Player:

Worked closely with cross-functional teams to migrate applications and streamline AWS deployments, ensuring on-time delivery.

Strong Analytical Skills:

Analyzed application performance and implemented efficiency improvements, reducing startup time by 25%.
